

Education & Training

Preparing industry for the sustainability challenges ahead

advise.verify.market.connect

Delivering green building intelligence through...

- New knowledge and skills for green buildings and product, materials & technology solutions
- Sustainability education for all levels and areas of your organisation

"I attended the Practical Sustainability program and found it to be particularly valuable for senior practitioners to maintain in a level of working familiarity with the wave front of this expanding subject (designing for ESD)... the program was particularly effective as an

efficient forum for focusing issues."

Richard Mann,
Chartered Architect, Senior Project Architect,
Bishop, Hitchcock, Irwin Architects, Sydney

ecospecifier's educational field

Full Knowledge Programs for Senior Levels

Our Executive Directions program is designed to develop Green Building Solutions intelligence in your organisation. Working with your principals, directors and project leaders, we can help you to deliver new standards in sustainable development and exemplary projects to clients. This program provides grounded, advanced information and strategies for practical application in the following areas:

- ESD Compliance & Solutions
- Building Rating & Materials Issues
- Green Building & Materials Procurement
- Life Cycle Assessment & Embodied Carbon in Practice

Seminars for Professional Teams

Our short learning seminars and presentations are ideal for busy teams, design and technical to marketing and sales. See the full range of our eco-topics online at ecospecifier.org & ecospecifier.com. They cover the spectrum of green building and materials concerns, including; Sustainability, Rating Tools, Energy, Sustainable Materials & Products, Healthy Buildings, Water & Green Roofs and Integrative Design Practice.

Tertiary Programs for Next Generation of Professionals

A full curriculum program is now available to prepare and empower future built environment professionals for market readiness. We provide educational programs & modules for universities and technical colleges. We recently developed a full Green Building tertiary curriculum to address the knowledge gap in the application of eco and health preferable building materials, products and technologies.

Education & Training

Preparing industry for the sustainability challenges ahead

Education is our way of contributing to a future that works more closely with the natural systems and brings people closer to realising how they can participate in preserving the fundamental productivity of our natural world

Educating industry – professionals in the workplace and pre-professionals in tertiary systems, has become one of **ecospecifier's** core services. We have developed a field of knowledge that is lacking in this rapidly changing field.

East Timor Sustainability Education

To embed and apply this knowledge is currently an industry wide imperative, particularly as pressure through new building codes, legislation and green rating tools continues.

Critical knowledge is still missing in the ranks of design and construction teams wanting to deliver exemplary green rated, Green Star™, BREEAM Gulf, Estidama Pearl (Abu Dhabi), Green Mark and other Green Rating

tools or LEED® projects. Many professionals, for example, still do not know how to specify green products, understand life cycle issues or know how to qualify green manufacturers.

Similar challenges face manufacturers who are being driven to meet the standards of an increasingly discerning market – a sustainability learning curve is still required - to re-position products for a green focused marketplace, to increase the ESD factor in existing products or, to educate staff on fundamental principles and practices of sustainability at all levels of business.

"Green Building Solutions is a very broad and complex area and your depth of knowledge and ability to tailor to our industry and our specific product lines was invaluable"

David Brooker,
Operations Manager,
Gunnensen Pty Ltd,
Melbourne, Australia

David Baggs speaks at DesignBuild

ecospecifier Global & Australasia is leading green building solutions resource also offering:

- Global Consulting
- Education & Training
- User Services
- Partners Programs
