

What is JH Termite Barrier System?

JH Termite Barrier is a combined physical, chemical termite barrier & Damp Proof Course (DPC). Designed for the pre-treatment of building structures, to prevent the concealed entry of subterranean termites & rising damp.

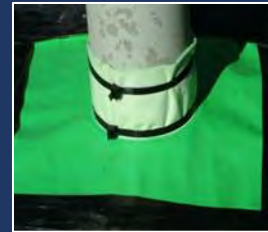

JH Termite Barrier is approved as an alternative solution in Accordance with the Building Code of Australia (BCA). The active ingredient in the JH Termite Barrier Deltamethrin is a synthetic Pyrethroid that kills & repels subterranean termites.

JH Termite Barrier perimeter blanket is available in 1.5m x 50m rolls, 0.3 mm x 50m rolls, 0.25m x 50m rolls, 0.15m x 50m rolls. Alternative sizes are available on request.

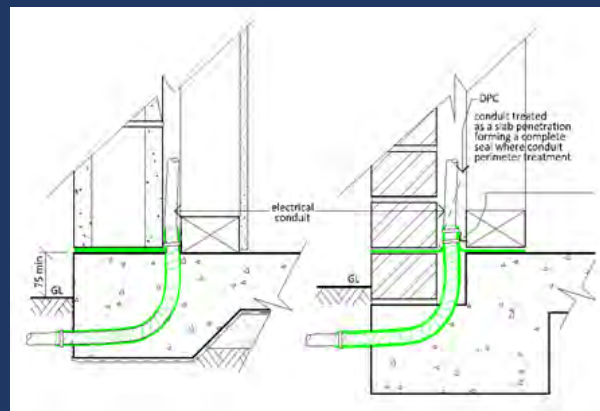

JH Termite Barrier installation flexibility

JH Termite Barrier is able to be easily cut / molded & joined to accommodate the complexities of Australian building designs.

JH Termite Barrier Pipe penetration collars are available in 60mm & 120mm diameter sizes.

JH Termite Barrier Electrical Conduit Installation

APVMA APPROVAL NO. 69617/61255 JH Termite Barrier Perimeter Installation

JH Termite Barrier attached to concrete slab edge. Timber wall frame is then positioned on the JH Termite Barrier.

JH Termite Barrier Bearer & Joist Installation

JH Termite Barrier joins and step downs in brickwork walls are made easily by fastening the JH Termite Barrier into position with 3M Super 74 Spray Adhesive.

JH Termite Barrier is an environmental friendly subterranean termite protection system for new buildings.

- JH Termite Barrier System has undergone Independent efficacy trials by (Further Research & Consulting) meeting the requirements as outlined in AS 3660. 2000 Part 3.

- JH Termite Barrier System is manufactured too and meets the CodeMark SAIG-CM20096 Certification requirements as a Termite Barrier & Damp Proof Course (DPC)
